Steril-Aire™® Fixtures, Replacement Lamps and DER Retrofit Kits - Guarantee of Performance and Compliance

Page 1 of 2

August 28, 2009

American Ultraviolet (AUV) has, through Steril-Aire's™® Direct UVC Tube Manufacturer / Supplier, designed exact replacement lamps for all Steril-Aire™® fixtures and replacement parts including the Steril-Aire™® RSE, SE, SEN and DE Models and more. Our lamps come with a 12,000-hour life span and will not harm the existing Steril-Aire™® ballast in any way. Our products are fully guaranteed as exact genuine replacements, exceed Steril-Aire™® tube life expectancy and offer substantial tube cost savings for your existing Steril-Aire™® installation.

Warranty and Guarantee:

If you install an AUV Steril-Aire™® replacement lamp and the Steril-Aire™® ballast fails within a twelve-month time frame, American Ultraviolet will retrofit the existing Steril-Aire™® fixture with our DER kit at no cost to you. (Please see Note on Page 2). Our retrofit kit comes complete with a cover to fit the existing Steril-Aire™® DE Series Body, replacement electronic ballast that snaps into the existing fixture once the old ballast is removed and our two year UVC Tube.

Benefits and Cost Savings:

Our DER retrofit kit for the Steril-Aire™® DE Series has a non-prorated five-year warranty on the ballast and the included lamp will last 2 years, 17,000 hours on our design. In addition our tube prices are guaranteed to hold firm for 5 years. After 2 years our **UVC Green Tubes** (less than or equal to 8mg of mercury per tube) still have 80% UV-C Energy Output of a New Tube by Independent testing. At the date of this letter our UVC Tubes have the highest output (11.6 mw per inch of tube length) through Independent Testing. This offers our Customers the real possibility of reducing the amount of fixtures in your existing system and the resultant costs including increased energy savings. **Please contact Ed Aaronson, Environmental Control Systems (aka HVAC Industries Online) at 877.824.4823 or 913.825.4999 for further questions.** (Continued page 2)

Note:

As with all HVAC, Mechanical Components and Products, maintenance and a scheduled maintenance schedule are required to maintain optimum performance with system aging. UVC Air and Water disinfection devices also require a scheduled maintenance schedule of replacing the UV tubes at the end of their published useful life. At the end of any UVC Tube's life it may still glow blue but the UV output can be nil to no UV – "c band energy germicidal output. In the event a UVC Tube was not serviced and is not glowing, displaying black marks at the end of the tube, it has been, with our 49 years of expertise, the expired tube could have possibility damaged the electronic ballast power pack. **If this is your case, we highly recommend that you contact Ed Aaronson, Environmental Control Systems (aka HVAC Industries Online) at 877.824.4823 or 913.825.4999 before investing any money on UVC tube replacements.** We can offer you our retrofit kit and / or also offer our services by testing your existing electronic ballast power pack to determine if it has been damaged or is still functional.

This is our commitment to serving our Customers and insuring that you do not spend needless funds for your system that may have been damaged in the event of a missed scheduled maintenance schedule

Best Regards,

Mr. Meredith Stines
